Abstract (en)
[origin: WO2010129979A1] The invention relates to a furniture flap drive (1) comprising an electric drive (7) having an electric motor and a mechanical actuating unit (8) having an actuating arm (4), the mechanical actuating unit (8) and the electric drive (7) being separate components and being releasably fastenable to each other. The actuating unit (8) has a bearing (28) in which the electric drive (7) can be suspended, the suspended electric drive (7) being swivelable about the bearing (28) towards the actuating unit (8). A locking device (27) is mounted at a distance to the bearing (28) and can be used to lock the electric drive (7), in a preferably releasable manner, with the actuating unit (8) once the latter has been swiveled open.
