Abstract (en)
[origin: WO2010130357A2] The invention relates to a pulling and compressing device for horizontally installing tube and pipe lines below ground, for example for passing below embankments or rivers, wherein a lift skid having a clamping element is displaceably disposed on a frame. The clamping element serves for capturing the drill string or pipeline and moving forward a distance corresponding to the skid stroke in the one or the other direction. In order to achieve this, the clamping element comprises a coupling tube having a pressure medium hose disposed between spiral-shaped internal ribs of the coupling tube.
