Abstract (en)  
[origin: EP2430909A1] A greenhouse (1) comprising at least one gutter section (4) and a roof extending from said gutter section, which gutter section is supported by at least one column (2), wherein said roof comprises a ridge section (6) as well as spaced-apart glazing bars which are connected to an edge of the gutter section near one end and to the ridge section near the other end, and wherein roof elements (7) are provided between adjacent glazing bars, being supported in rabbets formed in said glazing bars and in a rabbet of the gutter section, a special feature being the fact that the column is pivotally connected to an elongated foundation element (9) at least partially disposed in the ground, wherein the end of the column that faces towards the ground is provided between two wall sections (10) positioned opposite each other, which wall sections extend upwards from an end of the foundation element that faces away from the ground, wherein said wall sections and said column are provided with coaxial holes for receiving a pivot pin (12) therethrough, and wherein each wall section comprises flanged edges that engage the column.
