Abstract (en)
The method involves sectionally supporting a steel tape bundle (4) by carrier rollers (11-15) during transfer on a transfer path and simultaneously unwinding the steel tape bundle. An unwinding recess (32) is formed by changing position of the adjacent carrier rollers, where the recess extends in a direction of the transfer path. Two of the rollers are arranged on a frame part (29) and driven by a drive unit with same speed, where the frame part is hinged to another frame part (30). The bundle is supported by a supporting roller (10) in an unwinding position.

Abstract (de)
Verfahren zum Transfer eines Metallbundes (4), insbesondere eines Metallbundes in einer Coilbox, auf einem Transferweg (31) zwischen einer ersten Bundposition (5) und einer zweiten Bundposition (6), wobei der Metallbund (4) während des Transfers auf dem Transferweg (31) abschnittsweise mittels Tragrollen (11, 12, 13, 14, 15) gestützt wird, und wobei der Metallbund (4) gleichzeitig abgewickelt wird, wobei durch Änderung der Anstellung benachbart zueinander angeordneter Tragrollen eine sich in Richtung (8) des Transferweges (31) ausbreitende Abwickelmulde (32) ausgebildet wird.
