Abstract (en)

[origin: EP2216254A1] The unit has a pocket (12) arranged on a receiving chamber (21a) and dimensioned such that a conical beverage cup (20) or a bottle e.g. polyethylene terephthalate (PET) bottle, is inserted in a clamp seat into the pocket. A strip-shaped wall section (23) is partially cut free laterally from sidewalls of the pocket by an incision (21). The incision extends in parallel with lower edge of the pocket. Ends of strip-shaped wall section fold lines (22) extend in a direction perpendicular to the wall section, so that the wall section is bent around the fold lines into interior of the pocket.
