Abstract (en)
[origin: EP2431302A1] The transport device (1) has a basic structure which comprises a frame profile (2) and a bottom plate (3) arranged in the frame profile. The base plate has an upper cover layer (4a) and a lower cover layer (4b), where a core layer (5) is arranged between the two cover layers. The frame profile has a separate upper profile wall and a lower profile wall, between which the bottom plate is arranged. The upper profile wall and the lower profile wall are connected by a fastener, such that the bottom plate is held between the profile walls.
