Abstract (en)
The present invention is provided with an intelligent electric iron, which includes an ironing unit. The ironing unit includes a body and a controller to control the steam to be exported out or closed. The body is disposed with a handle; the controller is disposed inside the handle. A first detector is disposed in the body to detect that whether the user holds the handle. The first detector is signal connected to the controller. As the first detector is disposed to detect that whether the user holds the handle, the controller will control the steam to be exported out or closed according to the result. The present invention can avoid of misoperation.
