Abstract (en)
[origin: US2010293704A1] A toilet seat barrier is disclosed that may be rotatably supported by a spindle to allow a user to apply the toilet seat barrier on a toilet seat surface without touching the toilet seat. An adhesive is provided on the bottom side of the toilet seat barrier to releasably secure the toilet seat barrier to the toilet seat surface. Perforations may be formed along a length of the toilet seat barrier so that the barrier may be sized to the seat. Further, tabs may be formed on the top side of the toilet seat barrier to allow a user to remove of the toilet seat barrier without touching the seat.
