Abstract (en)

[origin: WO2010133850A2] A window assembly (118) comprises: a window regulator (144) for driving a main window (124) up and down, a connection system (196) with a latch (198), a division bar (122), and quarter-light window (206) which may be driven down by the regulator (144) to a controlled index position at which the latch (198) disengages such that the quarter-light may be left in a slightly lowered index position while the main window may be further lowered, the latch reengaging once the main window is raised again, the raising and lowering of the quarter-light window (120) enabling the quarter-light to securely engage with a seal (246) positioned between its top edge (204) and an A-pillar (106) of the vehicle (100) and also allowing a door to which the assembly to be opened and closed without interference between the quarter-light and the seal (246).
