Abstract (en)
[origin: WO2010134022A1] The present invention relates to a cleaner device (1,1A5IB) for boat hulls (15), said device (1,1A) having a positive or neutral hydrostatic trim when submerged and being of the type comprising at least one brush (7) for cleaning a boat hull (15), drive means (3), and means (4) for keeping said drive means (3) in contact with a boat hull (15), said device (1,1 A, IB) being self-moving and comprising a processing unit (8) adapted to process signals detected by sensors (91,92,93,101,102,103,50) and to select a motion trajectory (T,51) of the device as a function of said signals, said sensors (91,92,93,101,102,103,50) being adapted to detect at least one variation in the distance between said device (1,1 A, IB) and said boat hull (15).
