Abstract (en)  
[origin: WO2011012293A1] The invention relates to an insulation web for connecting a first profile part extending in a longitudinal direction and a second profile part extending in the longitudinal direction, of a door element, window element or facade element, to an insulation web profile extending in the longitudinal direction and is adapted for fixedly connecting the first profile part and the second profile part in a transversal direction that is perpendicular to the longitudinal direction. The invention further comprises an insulating body profile extending in the longitudinal direction and a foam body extending in the longitudinal direction and with a first height in a height direction that is perpendicular to the longitudinal direction and to the transversal direction, characterized in that the insulating body profile comprises a foam body holding tub that extends in the longitudinal direction and comprises a second height in the height direction such that insulating body profile connects to the insulation web profile.
