Abstract (en)
[origin: WO2010133433A1] A pressure compensation passage (9) having two interconnected pipe sections (10, 11) extends through the wall (1) of a refrigeration device, said wall having a first and a second shell (3, 4) and the space between the two being filled with foam. A first pipe section (10) is anchored on the first shell (3) of the wall (1) and has an apron (15) resting on the foam side against the first shell (3) and an apron (21) resting on the second shell (4). The second pipe section (11) extends through an opening (12) of the second shell (4) with radial play and engages with the first pipe section (10).
