Abstract (en)  
[origin: WO2010133430A2] The invention relates to a refrigeration device comprising at least one storage compartment (3, 4) and a thermally insulating wall surrounding the storage compartment (3, 4). The wall comprises an insulating material layer between an inner skin (14, 18) facing the storage compartment (3, 4) and an outer skin. The outer skin comprises at least one bottom plate (12) and a vertical wall plate (10). An evaporation container (38) is arranged underneath the bottom plate (12). Two passages (13, 19) opening into the evaporation container (38) are formed in the bottom plate (12), wherein an inner passage (19) is located on the side of the vertical wall plate (10) facing the insulating material layer and an outer passage (13) is located on the side of the vertical wall plate (10) facing away from the insulating material layer.
