Abstract (en)

[origin: WO2010135174A1] A system enables digital appliances to couple to third party application services directly. The system includes a device regulation/support site configured to generate a script program and a data template, and a digital appliance that selectively couples to the device regulation/support site and receives the script program and data template from the device regulation/support site, the digital appliance executes the script program with reference to the data template to couple directly to a third party application service and query the third party application service for data.
