Abstract (en)
[origin: EP2433520A1] The accessory (A) has a body that widens from an adaptation leg on a motor case (M) of a shaving and/or epilation apparatus, to a grooming head. The head ensures treatment of skin by rubbing and/or massaging using a rotative grooming tool. A grooming head driving system includes a reduction gear train that is provided with an inlet pinion engaged with an outlet pinion of the case. The grooming head drives the grooming tool at a rotational speed lower than that of the outlet pinion. An independent claim is also included for a corporal grooming assembly comprising a motor case and a removable epilation accessory and removable cutting assembly.
