Abstract (en)  
[origin: EP2434047A2] The household device has a drying room (1) for drying material to be dried, particularly textiles and a condenser for condensing moisture from air that is left from the drying room. An air duct (51) is formed for guiding the air towards the condenser. A moisture sensor (36) is formed for measuring humidity. The moisture sensor is arranged in the air duct or in the drying room. Independent claims are also included for the following: (1) a method for operating a household device; and (2) a computer program element with a computer program code.
