Abstract (en)

[origin: EP2434053A2] The tool (1) has a bearing placed in a housing of an eccentric cam gear wheel (7). Another bearing transfers mechanical work of a motor (5) to a base (3). The base comprises a stamping foot housing with a stamping plate (13) extending along a stamping axis (9) that is parallel to a plane of the latter bearing placed in a connecting rod. The stamping axis is formed between the former bearing and the plane of the latter bearing, and is displaced toward the motor. The connecting rod is bent toward the motor. A driven shaft is oriented vertically to the stamping axis.
