Abstract (en)
[origin: EP2434582A1] The terminal (10) has insulating terminal housing (12) with terminal contacts (20) for connecting electrical conductor. A contact element (30) has two leaf spring elements (32,34) provided partially away from each other and are extended, such that distance between free ends of spring is smaller than diameter of contact opening. The maximum distance separating spring is arranged outside housing, where the maximum distance is greater than diameter of contact opening, so that contact between contact element and contact surface formed inside contact opening is performed. An independent claim is included for printed circuit board arrangement.
