Abstract (en)

[origin: EP2434597A2] The system has a channel base part installed on a wall or a ceiling. A wall connection aperture (20) comprises a U-shaped frame element (22) adapted to a shape of the channel base part. The frame element comprises two lateral legs (29.1, 29.2) that are connected with each other through a transverse web (25) and define a receiving area (1) for the channel base part. Retaining tongues (28.1, 28.2) are formed at the transverse web for fixation of the frame element at the channel base part or a channel upper part.
