Abstract (en)  
[origin: WO2010136245A1] The invention relates to an auxiliary handle device of a hand-held power tool (10) having a tool housing (12), in particular a hammer drill tool and/or a chisel tool. It is proposed that the auxiliary handle device comprises a shell unit (14, 54), which is provided for the mechanical coupling to the hand-held power tool (10), and a bearing unit (28, 50, 52), which is provided to mount the shell unit (14, 54) in at least one operating state elastically moveable relative to a component of the hand-held power tool (10) in at least one direction in space, in order to mechanically decouple movements of the hand-held power tool (10) and the shell unit (14, 54).
