Abstract (en)

[origin: WO2010139399A1] The invention relates to a device for cutting food products, comprising a product feed which has a plurality of conveying units juxtaposed in parallel. Said conveying units can be driven jointly to simultaneously feed a plurality of products with which respective conveying units are associated to a cutting plane in which at least one cutting knife moves. The conveying units have a common drive and comprise respective transmission units the transmission ratio of which can be varied to individually vary the individual conveying speed of the conveying unit.
