Abstract (en)

[origin: WO2010136693A1] The invention relates to a system for recovering and pulling a submerged object (32), capable of being used on a vehicle, in particular a craft (30), and including: an inflation line (1) capable of conveying a gas from a gas source to at least one inflatable unit (31) for raising the object; downstream fastening means (2a, 7a, 7b) for the direct or indirect mechanical fastening of said inflation line (1) to the inflatable unit (31) for raising the object; and upstream fastening means (2b) for the direct or indirect mechanical fastening of the inflation line (1) to an anchoring point on the vehicle (30). The downstream fastening means (2a, 7a, 7b) and the upstream fastening means (2b) are provided on a cable (2") that is part of a pulling line (2) parallel to the inflation line and rigidly connected thereto. The invention also relates to a method for implementing same.
