Abstract (en)
[origin: WO2010136067A1] The present application pertains to a dispenser (1) for dispensing tissue paper from a volume defined within a dispenser housing (10). The dispenser housing being made from a flat material, preferably a cardboard material, the dispenser having at least one handling section (30, 32, 34) which can be folded out from a wall (16, 20, 22) of the dispenser housing, the dispenser housing having at least two layers of the flat material at the location where the at least one handling section is situated, wherein the at least one handling section is present in the outer layers of the flat material only such that at least the innermost layer of the flat material] remains intact and seals off the volume defined by the dispenser housing at the location where the at least one handling section is present such that the dispenser can be used as a fully operational dispenser when the at least one handling section is folded out.
