Abstract (en)

[origin: WO2010136002A1] The invention relates to a handle (2) for a bag (1) for preparing an infusion beverage in a vessel, wherein the bag (1) can be connected at the head to the handle (2). The invention further relates to a method for producing the handle (2). It is proposed to form the handle (2) from a fastening element (3) for fastening the bag and a holding element (4) for holding the bag to the vessel, wherein the holding element (4) comprises two mutually opposed flaps (6), the head sides (7) of which are arranged at a distance from each other such that a gap (8) is formed, which widens, preferably conically, from the head side (7) to the opposing foot side (9), wherein each flap (6) is connected to at least one cheek (11), on which at least one predetermined breaking fillet (12) is disposed, which is connected to the fastening element (3).
