Abstract (en)
[origin: WO2010136638A2] Waste container that is formed of a base part (1), a container body attached on top of it which container body comprises an outer casing (6) and a cover plate (7) attached to the upper surface of the container body in which case the cover plate comprises a gap (5) for locating the waste into the container and the container body (6), (7) comprises at least one curved surface (6) that makes the mentioned body to have a shape of a vertical cylinder which surface is meant to be a media surface for example for commercials (8) and that a transparent casing (2) is located outside the mentioned surface (6) in which case the film (8) that functions as the media surface is located between (2) the curved surface (6) and the casing. A transparent, curved casing (2) can be brought to be more curved for the changing of the media surface (8) in which case out of the length of the both side edges of the casing (2) at least a part comes out of the slot places (4) formed at the edges of the curved surface (6) so that the casing (2) can diverge from the curved surface (6).
