Abstract (en)

[origin: WO2010136504A1] The invention relates to a bump stop for exactly positioning an element whose position can be changed, such as a door, a lid, or the like on a vehicle body. In order to propose a bump stop that allows the bump stop to be positioned more easily, more quickly, and above all more precisely, it is provided that the bump stop (1) comprises an accommodating sleeve for fixing the bump stop (1) on the body or the element whose position can be changed, that an elastically deformable cushion (3) is supported in the accommodating sleeve (2), the projection of which elastically deformable element above the accommodating sleeve (2) can be adjusted, and that a position aid that allows the element whose position can be changed to be exactly positioned relative to the vehicle body is provided.
