Abstract (en)

[origin: WO2010136666A1] The invention relates to a connector (100) with a blade (110) that comprises a housing (105), comprising: a side opening (115) for receiving an electric wire (115); a flexible blade (110) for contacting said electric wire and for retaining same by applying a pressure thereto toward a wall (125) of said housing; and an opening (130) opposite a free portion of said blade, said opening having a shape for guiding the head of a tool (140) to follow a helical movement. In some embodiments, the opening (130) is threaded and cylindrical, and the thread of said opening includes a single helical groove (135) formed in the wall of said opening.
