Abstract (en)

[origin: EP2436490A2] The stand has a guide slide (13) for accommodating a machine tool. An advancing device comprises a counter contour device engageable into a contour device of a guide rail. The guide slide is displaceable by the advancing device along the guide rail, and a fixing device (20) fixes the guide slide at the guide rail. A decoupling device (30) decouples the slide from the guide rail during exceedance of preset force. The fixing device has an adjusting device (22) connected with an engagement element (21) that is brought into engagement with the contour device.
