Abstract (en)

[origin: EP2436630A2] The insertion device has propelled conveying device (7) comprising endless belt (8) that is connected to the case gutter of roll winding device (1). Two roll casings (5) are positioned in predefined manner in the conveying device such that desired spacing is adjusted between two roll casings. A clamping device (12) is arranged in the endless belt. An independent claim is included for method for insertion of two cases into roll winding device.
