Abstract (en)  
[origin: EP2436641A1] The platform (1) has hydraulic jacks (35, 36) arranged outside an extensible telescopic linkage (30). A stroke direction of the jacks is directed towards a longitudinal direction of the linkage. The jacks are connected in series such that each jack exhibits a hydraulic connection with a subsequently arranged jack. An upper end of the linkage is connected in center of gravity of a hydraulically elevated and lowerable work platform part (20). The work platform part comprises a cantilever arm with a resilient rope to resiliently fasten a load or a person with a cantilever arm of the platform.
