Abstract (en)

[origin: EP2437025A1] The system (1) has a cylindrical tubular extension (14) comprising a cylindrical fixed part (15) fixed to a firing station (6), where the part receives a front end (9) of cylindrical tube (2) carrying a missile (5). A cylindrical movable part (17) is mounted in the fixed part and occupies a retracted position before assembling the tube and an output position relative to the fixed part as a result of assembling the tube on total length of fixed part. The tube is ready to be operated in the output position. The movable part constitutes an extension length of the tube to launch the missile.
