Abstract (en)
[origin: WO2010139909A1] The invention relates to a stirrup for horseback riding including a single half-arch (1) for connecting together a first end of a stirrup floor (5) and an eyelet (4) for mounting the stirrup on a stirrup leather, and a means for retaining the foot in the stirrup for enabling a quick release of the foot from the stirrup in the event of a fall, for which the retaining means consists of a curved elongate arm (2) having a proximal end (2a) rigidly connected to a second end of the floor (5) and a free distal end (2b), comprising, from the proximal end thereof, a first rigid segment (21), a second segment (22) comprising means (13, 14) arranged so as to provide at least one reduced stiffness area enabling a bending of the arm (2) in at least one first direction, and a third segment (23) ending in the free distal end (2b).
