Abstract (en)

[origin: WO2010139884A2] The invention relates to a method for producing an argon-enriched fluid and an oxygen-enriched fluid from a fluid resulting from a method for purifying of oxy-fuel combustion fumes, wherein said method comprises purifying the residual gas by a purification method in order to produce a gas enriched with carbon dioxide (119) and a residual gas lean in carbon dioxide (120), pretreating the residual gas lean in carbon dioxide in order to obtain a flow enriched with carbon dioxide and a flow (123) lean in carbon dioxide, treating the flow lean in carbon dioxide by a cryogenic technique so as to extract at least an argon-enriched fraction (127), an oxygen-enriched fraction (126), and a fraction (125) lean in argon and/or oxygen.
