Abstract (en)

[origin: WO2010139504A1] A method for operating a data transfer system with data in a data packet is described, which is sent between a transmission apparatus (25) and a reception apparatus (26). In order to determine more precisely the time of the recording of information, transmission time information (6) from a transmission clock (27) is added to the data packet prior to the transmission, reception time information (7) by means of a reception clock (28) upon reception of the data packet is determined, and the delay (15) of the received data packet is calculated from a deviation between the transmission time information (6) and the reception time information (7).
