Abstract (en)

[origin: EP2438842A2] The tube (10) has a support part (11) i.e. hollow cylinder, and a tongue-shaped locking element (40) arranged at the support part. The locking element is movable relative to the support part from a locking position in which the tube is fixed at a suction opening to an unlocking position in which the tube is detachable from the suction opening. A spring element is formed as a single piece at the locking element and elastically deformable in the unlocking position of the locking element for exerting a portion of reset force on the locking element.
