Abstract (en)
[origin: EP2439078A2] The data carrier has a substrate, where multiple cutting lines (14) are arranged in an intersection (12). The cutting lines are characterized by the parameter length, position, orientation, width and curvature. One of the characterizing parameters for the cutting lines of intersection of the sectional area varies aperiodically or according to a pseudo-random number distribution. An independent claim is also included for a method for manufacturing a data carrier.
