Abstract (en)
[origin: EP2439142A1] The device (1) comprises a transport path (3) on which the packaged goods are conveyed continuously by a driver device (5), and a conveyor on which the receiving container being clocked to the receiving position is conveyed. An insertion device inserts the packaged goods at the receiving position perpendicular to the conveying direction in one of the receiving containers. A module device is arranged to turn the container such that the packaged goods is pushed from the transport path via the lateral opening in the tilted container (9). An independent claim is included for method for transporting packaged goods and displacing packaged item into receptacle.
