Abstract (en)

[origin: EP2439354A2] The staircase has an in-use position perpendicular middle panel (I) which receives all the stages of the stairs over the entire height. The stages of stairs are clamped at the peripheral side of the middle panel while receiving the load of the stages of stairs. The middle panel is a solid block, whose thickness is about 104 mm, to accommodate the stairs within all of the recesses (21-29,210-216). The stages of stairs on or outside of middle panel are fixed or bolted together. An independent claim is included for manufacturing method of central string of staircase.
