Abstract (en)

[origin: EP2439371A2] The sealing arrangement has outer wing (2a) and inner wing that are surrounded by glass frames (3b), and are extended in parallel direction. The inner and outer wings are transferred from a closed position to an open position. The wings are slidable at an intermediate space (4) formed between an inner layer (6a) and an outer layer (6b) of the wall. A sealing element (17) on outer layer is connected to another sealing element (18) at region of intermediate space facing away from the region of outer side wing.
