Abstract (en)
[origin: EP2260740A1] The strap has mutually hinged elements e.g. hinged links (7), including an edge, center and intermediate meshes (2, 3,4) whose part is made of a material fragile to shocks. The meshes include a housing consisting of holes (15, 15') for receiving a connection member of the hinged elements. A clearance (20) of the connection member is provided next to open ends (16) of the holes formed in the meshes for preventing contact at a point between the connection member and the meshes, where the connection member is formed of a yoke pin (10) or assembling rods. The meshes are made of a material chosen from ceramics, sintered hard metal, glass or mineral such as sapphire or ruby.
