Abstract (en)

[origin: WO2010142903A2] The invention relates to an assembly of at least two stackable transport trunks (M, M1, M2), each trunk (M) having a body (1) with a generally parallelepiped shape, including a bottom (3) and four sidewalls (4, 5, 6, 7) connected to the bottom (3) and being closed by a removable lid (2), one of the sidewalls of each trunk including nesting means (16, 17) for engaging with the nesting means (16, 17) of the sidewall of another trunk on which it is stacked. According to the invention, the nesting means (16, 17) are adapted for defining, when in engagement, a sliding link having a translation direction parallel to the side surfaces having the nesting means and to the bottoms (3) of the trunks, and for guiding the translation of the trunks on each other, the corresponding sidewalls being adapted for enabling the cooperation of the nesting means and enabling said translation.
