Abstract (en)  
[origin: WO2010142443A2] The invention relates to a book or magazine binding consisting of a front cover and a rear cover connected to each other in an articulated manner by a rear part, for binding at least one quire consisting of a selected number of same-size sheets of paper, or a plastic material similar to paper, folded in the middle, in order to form the pages of a book or a magazine, the closed quire having at least one recess in the back thereof, that penetrates all of the sheets in the quire in the same way. A very thin, rod-type inset having a selected rigidity is arranged in the fold of the innermost sheet of the quire, said inset bridging the recess, and a flat, flexible connecting element is fixed to both sides of the rear of the quire on the two binding covers, said connecting element being guided over the section of the rod-type inset in order to hold the rear of the quire on the inner rear part of the binding.
