Abstract (en)

[origin: WO2010142429A1] The present invention relates to polymerizable masses, comprising A 5 - 50 % by weight polyurethane, having at least one soft segment and B 30 - 95 % by weight alkylmethacrylate having 1 - 6 carbon atoms in the alkyl radical, wherein the polyurethane comprises a molecular weight in the range from 5,000 - 200,000 Daltons. The present invention further relates to curable compositions comprising the indicated polymerizable masses. The polymerizable masses can be used for producing coatings and impact-resistant objects, and for gluing objects.
