Abstract (en)
[origin: WO2010143104A2] The invention relates to a roller blind mounting assembly, including a tubular shaft used to roll and unroll the blind and a tip (6) for insertion into the shaft, and through which a rod (7) passes, one end of which is provided with a core (8) for the rotatable linking with the shaft, the other end (7a) of the rod being received in a recess forming a rotatable bearing, the relative position of the tip (6) along the length of the rod (7) being variable, said assembly comprising a device for translatably locking the tip (6) onto the rod (7), including a yoke (16) having two walls (16a, 16b) which are spaced apart and connected by a bridge (16c), each wall comprising a window (17a, 17b) through which the rod (7) passes, the bridge (16c) having a pressure means (M) for tightly clamping the rod on an edge (19a, 19b) of the windows, the rod (7) comprising notches (20) that are distributed over the length thereof, with which the edge (19a, 19b) of at least one window (17a, 17b) of the yoke (16) are engageable so as to firmly stop the yoke on the rod and lock the tip (6) against the yoke (16).
