Abstract (en)

[origin: EP2261564A1] The arrangement has multiple of heat shield elements (3) arranged adjacent to each other at a supporting structure (30). The heat shield elements are fixed at the supporting structure using a screwing shaft (15) in a laminated spring packet (19) that is provided in the supporting structure. The packet provided in the supporting structure is equipped with a funnel shaped screw threading unit (33), into which the fixing screw is guided and inserted. The funnel shaped screw threading unit is fixed at the laminated spring packet in a force fit manner. An independent claim is also included for a method for mounting the heat shield element arrangement.
