Abstract (en)
[origin: EP2441352A1] The upright has openings in the form of recesses (1) on height of the upright and longitudinal folds (3, 4) present on entire height of the upright, where the upright is formed from a single metal sheet folded and welded on the entire height of the upright so as to form a closed perimeter section. The folds are placed on a same face of the upright. Folded area is positioned in middle of the face. The folded area includes orifices for riveting or bolting bracings. The section has a polygonal shape outside of the folded area.
