Abstract (en)
The invention describes an injector for the injection of a first fluid into a second fluid streaming in a main channel, whereby the injector comprises at least one inlet for said first fluid and a first group of outlet openings for said first fluid, whereby said first group of outlet openings is connected to a conduit means. The first fluid is injected through two different groups 5, 6 of outlet openings 5a, 6a with independent conduit means 7, 8.
