Abstract (en)

[origin: EP2441636A1] The system has two carriageways that are provided in the areas of terminals and are optionally provided along tracks (1,2) with a switch (4) for enabling a contact. The switch and four adjacently located guide structures (41,41a,42,42a) rigidly connected together are pivoted about an axis (40). Outer guide structures (42,42a) hinged together to form two mutually spaced locations are pivoted about separate axes (40a,40b). The switch is operated between two positions based on pivoted guide structures.
