Abstract (en)

The cylinder has a movable core (2) provided in a housing (1). An electronic lock mechanism (3) has an actuator (5) controlled by the lock mechanism for displacement of a locking body (4) moved between a closing position and a releasing open position in which movements of the core are selectively blocked with respect to the housing. The locking body rests at a movable reverse mechanism (10). The locking body is moved during a movement of a reverse device in the position blocking the movement of the core. The reverse mechanism has a reverse body (11) moved with respect to the locking body.

Abstract (de)

Ein Schließzylinder mit einem elektronischen Sperrmechanismus (3) zur Ansteuerung eines Sperrkörpers (4) hat eine in den Bewegungsbereich des Sperrkörpers (4) hineinragende Rückschlageinrichtung (10). Bei der Einleitung von Vibrationen in den Schließzylinder drückt die Rückschlageinrichtung (10) den Sperrkörper (4) in Richtung Schließstellung des Schließzylinders. Damit wird ein unberechtigtes Entriegeln des Schließzylinders mittels Einleitung von Vibrationen verhindert.
