Abstract (en)  
[origin: EP2441945A2] The carburetor has a rotary mounted throttle element with a throttle shaft (20) and a rotary mounted choke element with a choke shaft (18), where coupling elements define a start position of throttle element and choke element in a latching position. One of the two coupling elements is formed in partially elastic manner, and the elastic coupling element is elastically deformed during rotation of the choke shaft from the latching position in an opening direction.
